

Modernize IBM i Backups

The first SaaS VTL solution to eliminate complexity and unify backup data management of IBM i

Now available in Compass® is the Compass Tape Gateway feature which delivers automated cyber resilient protection for IBM i workloads. The integrated Virtual Tape Library (VTL) solution is built for operational efficiency. This new feature supports BRMS, SAVSYS, and other IBM i backup utilities. Compass simplifies IBM i disaster recovery operations, introduces transparent cloud connectivity for IBM i backup data, and integrates IBM i backups with the entire enterprise data protection environment.

Single, unified
data protection
solution including
IBM i

Eliminate physical
and virtual tape
silos

Cyber protection
for IBM i backup
data

Multi-tenant
support for
multiple IBM i
workloads

Who Will Benefit?

- **IBM i customers wanting to migrate to the PowerVS cloud.** Compass Tape Gateway integrates IBM i data protection safely and securely into the IBM Cloud.
- **Customers using tape and proprietary appliances.** Simple, secure, and automated VTL feature helps eliminate tape management complexity and cost.
- **IBM i customers looking to eliminate tape, DataDomain, or other VTL products.** Compass delivers IBM i backup in a SaaS model, both on-premises and in-cloud, with flexible vault configurations and sizes.

Compass VTL Features

- Enterprise data protection solution delivered in a **SaaS model** on-premises and in-cloud
- **Automatic management** of VTL operations
- Compass Cyber Shield **industry-leading Cyber protection** for IBM i backup data
- **Connected to IBM i via iSCSI** with tape operations
- **Modernization** of physical and virtual tape environments
- Transparent integration of virtual tape data into **data center and cloud**
- **Reduce backup times** and improve RPO
- **Proactively managed**, monitored, and maintained environment by Compass analytics
- **Multi-tenant support** for VTL workloads into a single backup vault
